What is GDPR?

The General Data Protection Regulation (GDPR)

(Regulation (EU) 2016/679) is a regulation by which the
European Parliament, the European Council and the
European Commission intend to strengthen and unify
data protection for individuals within the
European Union (EU).

Why should companies focus on GDPR?

The general data protection regulation is in force since 25 May 2018 and the GDPR establishes a tiered approach to data breach penalties which enables the supervisory authorities to impose fines for some infringements of up to the higher of 4% of annual worldwide turnover.

What are the key points to retain?

Some of the key points and obligations to consider include:

- Appointing a Data Protection Officer;
- Responsibility and data protection by design and by default:
- · Role of data controllers:
- Records of data processing activities and other procedures;
- · Lawfulness of processing;
- Data Protection Impact Assessments:
- Notification of personal data breaches.

How to maximize effectiveness and optimize processes?

The usage of tools can enhance the effectiveness and the efficiency of the adoption and operation of all the GDPR processes when supported by adequate tools. The adequate selection and usage of these tools will allow the organisations to support all the peers to contribute in an agile way and will reduce the effort on implementation and maintenance of operations and associated compliance evidence.
